

Make a Bar Graph

You can show data in more than one way

Bar Graphs display data so that it can be easily understood. You can use graphs to compare sets of data.

How to make a bar graph:

STEP 1 Use the data from the table to choose the right **scale**. All scales start at 0.

STEP 2 **Draw and label** the scale on the **vertical axis**. (Vertical means "up and down.")

STEP 3 **Draw and label** the **horizontal axis**. (Horizontal means "across.")

STEP 4 List the name of each item.

STEP 5 **Draw vertical bars** to represent each number.

STEP 6 **Title** the graph.
