

Name: _____

Triangle Inequality

Exercise 1: A triangle has one side of length 8 cm and another of length 17 cm. Describe the possible lengths of the third side.

Exercise 2: Explain why $\triangle PQS$ is an isosceles triangle.

Exercise 3: Explain why the sum of the three altitudes of a triangle is always less than its perimeter.

Exercise 4: Given: \overline{RS} bisects $\angle QRT$, $\overline{PQ} \parallel \overline{RS}$. Prove: $\triangle PQR$ is an isosceles triangle with vertex R

Exercise 5: Given that $EF = 2.9$ cm and $AD = 2.8$ cm. Describe how each pair of angle or segment measures is related.

1. $m\angle AED$ and $m\angle DEF$
2. DE, EC
