

Perimeter

The **perimeter** is the distance around a closed plane figure.

To find the perimeter of a polygon (closed geometric figure with straight line segment sides), **ADD** all the side lengths of the figure.

Examples:

A- Find the perimeter, P , of the triangle knowing that the lengths of its sides are 9 cm, 12 cm and 7 cm

$$P = 12 + 9 + 7$$

$$= 28$$

So, the perimeter is 28 cm.

B- A rectangle has a length of 8 centimeters and a width of 3 centimeters. Find the perimeter.

$$P = 8 \text{ cm} + 8 \text{ cm} + 3 \text{ cm} + 3 \text{ cm} = 22 \text{ cm}$$

C - Find the perimeter of a square with each side measuring 2 inches

$$P = 2 \text{ in} + 2 \text{ in} + 2 \text{ in} + 2 \text{ in} = 8 \text{ in}$$

Exercises

- Find the perimeter of $\triangle ACB$
- Find the perimeter of $\triangle ADB$
- Find the perimeter of quadrilateral ADBC.

Your family love decorations. You want to hang a ring of lights all the way round your dining room.

What is the perimeter of the room?
