

Solving Inequalities Using Addition or Subtraction

An **inequality** is a statement formed by placing an inequality symbol between two expressions. For example, $y + 5 \leq -6$ is an inequality.

The **solution of an inequality** with a variable is the set of all numbers that produce true statements when substituted for the variable. You can show the solution of an inequality by graphing the inequality on a number line. When you graph an inequality of the form $x > a$ or $x < a$, use an open circle at a . When you graph an inequality of the form $x \geq a$ or $x \leq a$, use a closed circle at a .

Inequality	Words	Graph
$x < 3$	All numbers less than 3	
$y > 2$	All numbers greater than 2	
$z \leq 3$	All numbers less than or equal to 3	
$n \geq 2$	All numbers greater than or equal to 2.	

The freezing point of water is 0°C . At temperatures at or below the freezing point, water is a solid (ice). Write an inequality that gives the temperatures at which water is a solid. Then graph the inequality. Let t represent the temperature of water. Water is a solid at temperatures less than or equal to 0°C .

The inequality is $t \leq 0$. The graph is shown below.

Solving Inequalities You can use the following properties to find solutions of inequalities involving addition and subtraction. Using these properties, you can write equivalent inequalities. **Equivalent inequalities** are inequalities that have the same solution.

Addition and Subtraction Properties of Inequality

Words: Adding or subtracting the same number on each side of an inequality produces an equivalent inequality.

Algebra: If $a < b$, then $a + c < b + c$ and $a - c < b - c$.
If $a > b$, then $a + c > b + c$ and $a - c > b - c$.

Example 1: Solve $m + 5 \geq 10$. Graph and check your solution.

$$m + 5 \geq 10$$

$$m + 5 - 5 \geq 10 - 5$$

$$m \geq 5$$

Write original inequality.

Subtract 5 from each side.

Simplify.

The solution is $m \geq 5$.

Check Choose any number greater than or equal to 5.

Substitute the number into the original inequality.

$$m + 5 \geq 10$$

$$8 + 5 \geq 10$$

$$13 \geq 10 \checkmark$$

Write original inequality.

Substitute 8 for m .

Solution checks.
